

Prestel Elettronica has been working in the terrestrial television reception field since 1957 manufacturing patented antennas. In 1987 the Company extended its product range by founding a “special wiring” division aimed mainly at the aeronautical, civil and military, railway and automotive sectors of industry. This initiative was made possible by the company’s expertise in the field of electronics. An increase in the manufacture of cables led to the need for new, up to date, manufacturing facilities. A new site was therefore built in 2005 in an area of 2300 square metres, equipped with all the necessary equipment and a highly efficient organisation. Prestel Elettronica Srl is affiliated to the following:

- AIAD (Italian Industries Federation for Aerospace, Defence and Security)
- Torino Piemonte Aerospace

A continual growth in production volumes and the ensuing need for greater operating space and new technology led to the foundation of Prestel Avio s.r.l. on April 1st 2008, for the production of cables for fixed wing aircraft. As well as all Prestel Elettronica’s experience and technical know-how acquired in over two decades in the production of cables, corporate philosophy was also transferred to the new company; this approach strives to always ensure the highest standards of quality and the total satisfaction of customer needs. These objectives were achieved by the careful monitoring of the production phases, a high level of flexibility in the production phases and flexibility regarding production volumes. Qualified personnel carefully carry out the more complicated operations, which mainly concern products that are mainly produced manually. The delivery of products that are always tested and certified using the best possible technology is an additional guarantee of the Company’s standards of quality and professionalism.

The Quality Management System at Prestel Elettronica and Prestel Avio is UNI EN ISO 9001:2008 and UNI EN 9100:2005 certified.

Both companies are qualified suppliers for IAQG (International Aerospace Quality Group) and are therefore listed in a specific database devised by global aeronautical companies.
